

PRODUCT SHEET

Elbow connector for through wall parapet roof drains

Article:

i315

Diameter:

110 and 100 [mm]

In a box:

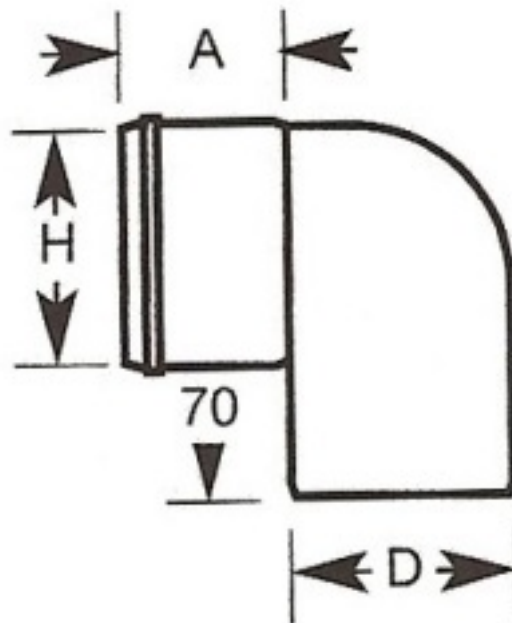

20 pcs.

Elbow connector is an element that can be used for constructing a roof drainage system.

Most often used in conjunction with through wall parapet roof drains, which outflows rainwater horizontally.

The elbow is designed to redirect the discharged rainwater down to the next elements of the roof drainage system.
