

PRODUCT SHEET

Flat roof pipe collar – PVC

Article:

i113.1

Diameter:

35 - 90 [mm]

Height:

180 [mm]

In a box:

25 pcs.

Intended for sealing through-roof passages of sewage, ventilation and other pipes.

Can be bound with PVC after heating.

Does not require adhesive.

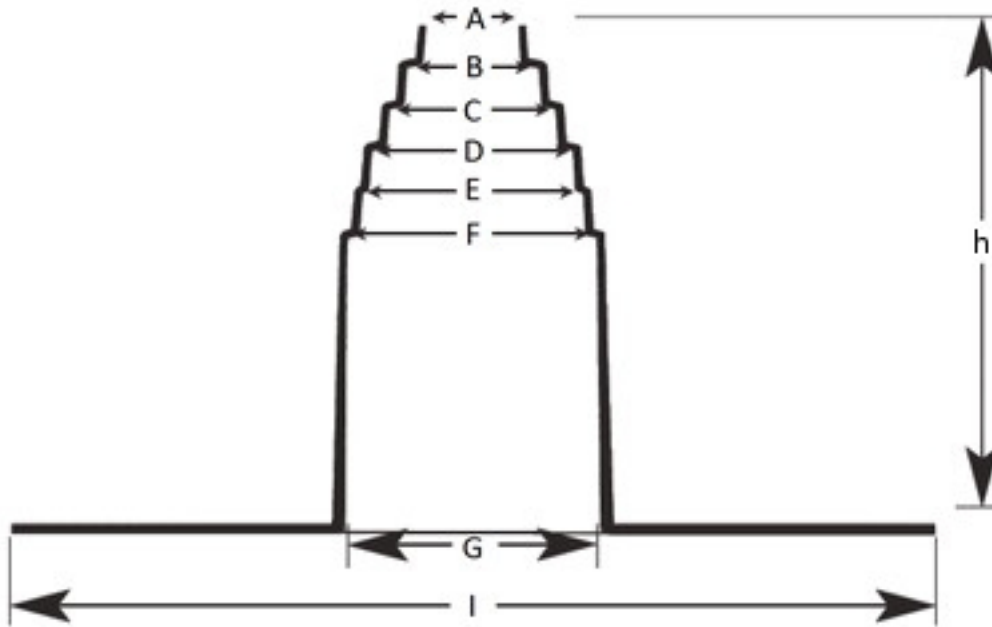

The diameter can be adjusted (by trimming) from 35 mm to 90 mm.

We recommend using a band clip to provide more effective sealing.

The mounting temperature of the sealing to the PVC foil is 450 – 520 °C.

The use of a higher temperature may cause a damage to the layer protecting against UV, which in turn may lead to the degradation of the sealing and unsealing of the roof surface.
