

PRODUCT SHEET

Roof pipe seal – PVC

Article: 120-370-060-010	Diameter: 10 [mm]	Height: 60 [mm]	In a box: 25 pcs.
------------------------------------	-----------------------------	---------------------------	-----------------------------

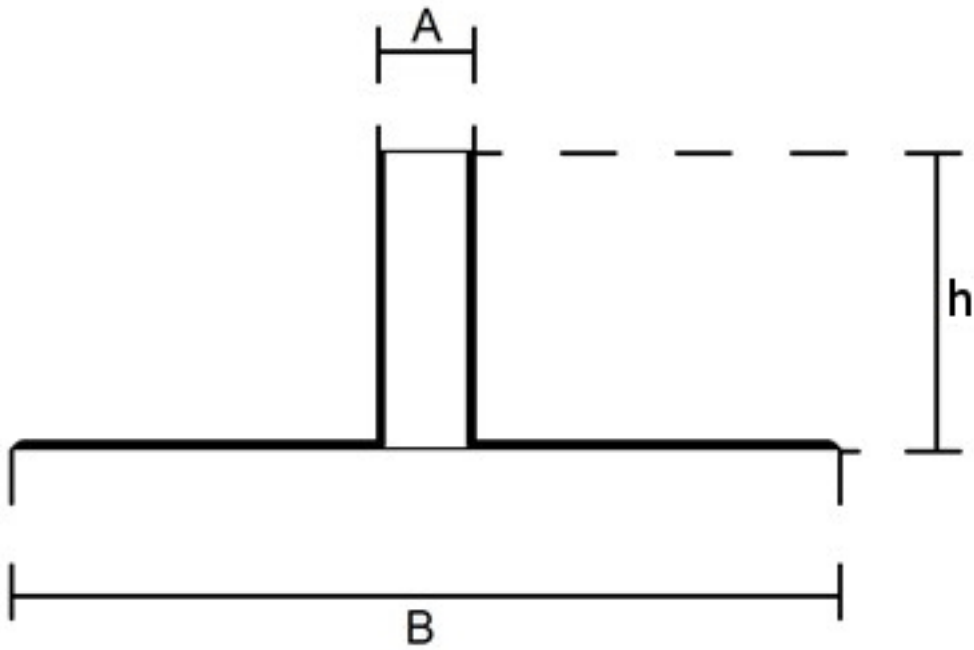

Intended for sealing wire, cable, etc. through-roof ducting.

The sealing flange is easily weldable with PVC membrane, providing a tight connection and preventing water from penetrating hydro-insulation.

The mounting temperature of the sealing to the PVC foil is 450 – 520 °C.

The use of a higher temperature may cause a damage to the layer protecting against UV, which in turn may lead to the degradation of the sealing and unsealing of the roof surface.
