

## PRODUCT SHEET

### Roof pipe seal – PVC

**Article:**  
120-540-900-013

**Diameter:**  
13 - 40 [mm]

**Height:**  
120 [mm]

**In a box:**  
25 pcs.

Intended for sealing cable, pipe, etc. through-roof ducting.

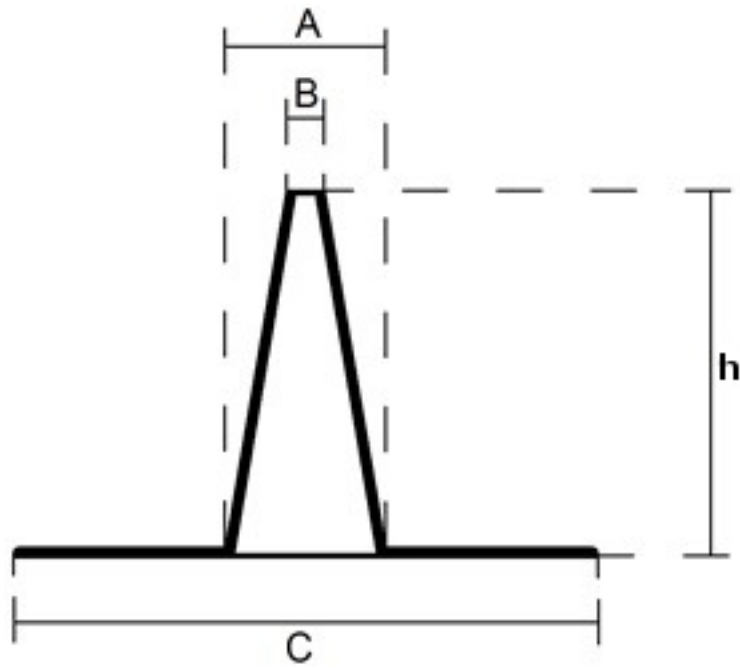

The diameter can be adjusted from 13 mm to 40 mm.

When heated with a burner, it plasticises and binds with PVC.

The mounting temperature of the sealing to the PVC foil is 450 – 520 °C.

The use of a higher temperature may cause a damage to the layer protecting against UV, which in turn may lead to the degradation of the sealing and unsealing of the roof surface.
