

## PRODUCT SHEET

### Vent pipe for TPO membrane – IDEAL system

**Article:**  
150-420-240-075

**Height:**  
240 [mm]

**Diameter:**  
75 [mm]

**In a box:**  
15 pcs.

Vent pipes enable water vapour accumulated under the hydro-insulation to be released without affecting the hydrophobic properties of TPO membranes and thermal insulation properties of the layers.

This enables you to avoid serious damage typical to waterproof roofing with poor ventilation (curling, bulging, dampness of the thermal insulation layer). This could cause partial or complete loss of thermal insulation properties.

Made of special material characterised by high resistance to UV radiation, ozone, and other atmospheric and chemical agents, adapted to TPO membranes.

Due to refining additives, the roof vents maintain their flexibility and dimensional stability in a wide temperature range
